步驟：

選擇 *[Creat a New Virtual Machine](#)*

新建一個虛擬機。

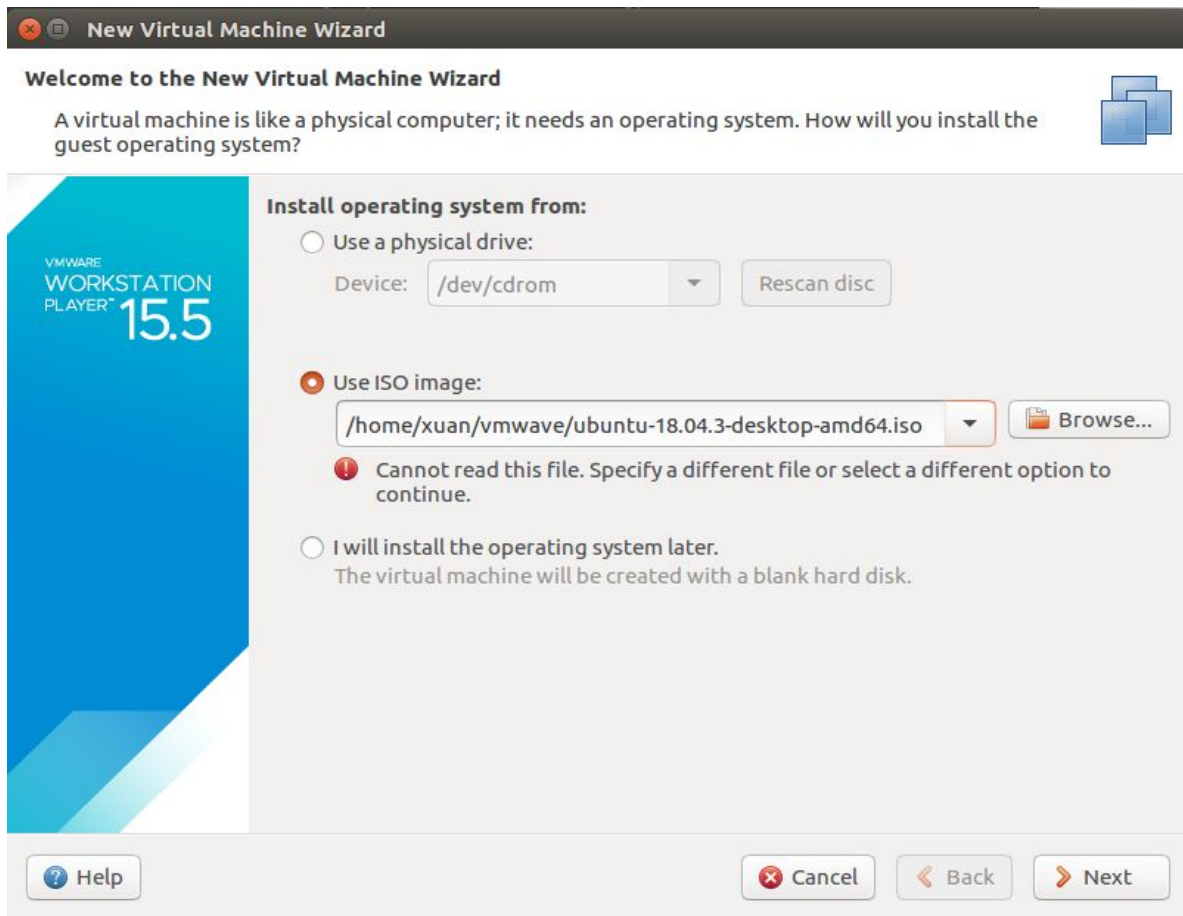

## 步驟：

選擇 *iso image*.

這邊的版本是  
`ubuntu-18.04-live-server-amd.iso`

前面的 `/home/xuan/vmware/` 是我的資料夾路徑。

選擇檔案後 > **Next** 下一個步驟。

## 我們不一樣？

選擇 *iso image*.

這邊如果選的版本是  
`ubuntu-18.04.3-desktop-amd64.iso`

這個是**桌面版**的，如果選錯後步驟  
也會不一樣又...

由於這邊是**server** 教學，所以先不  
做桌面版的了。

## 步驟：

這邊是命名使用著名稱及設定密碼。

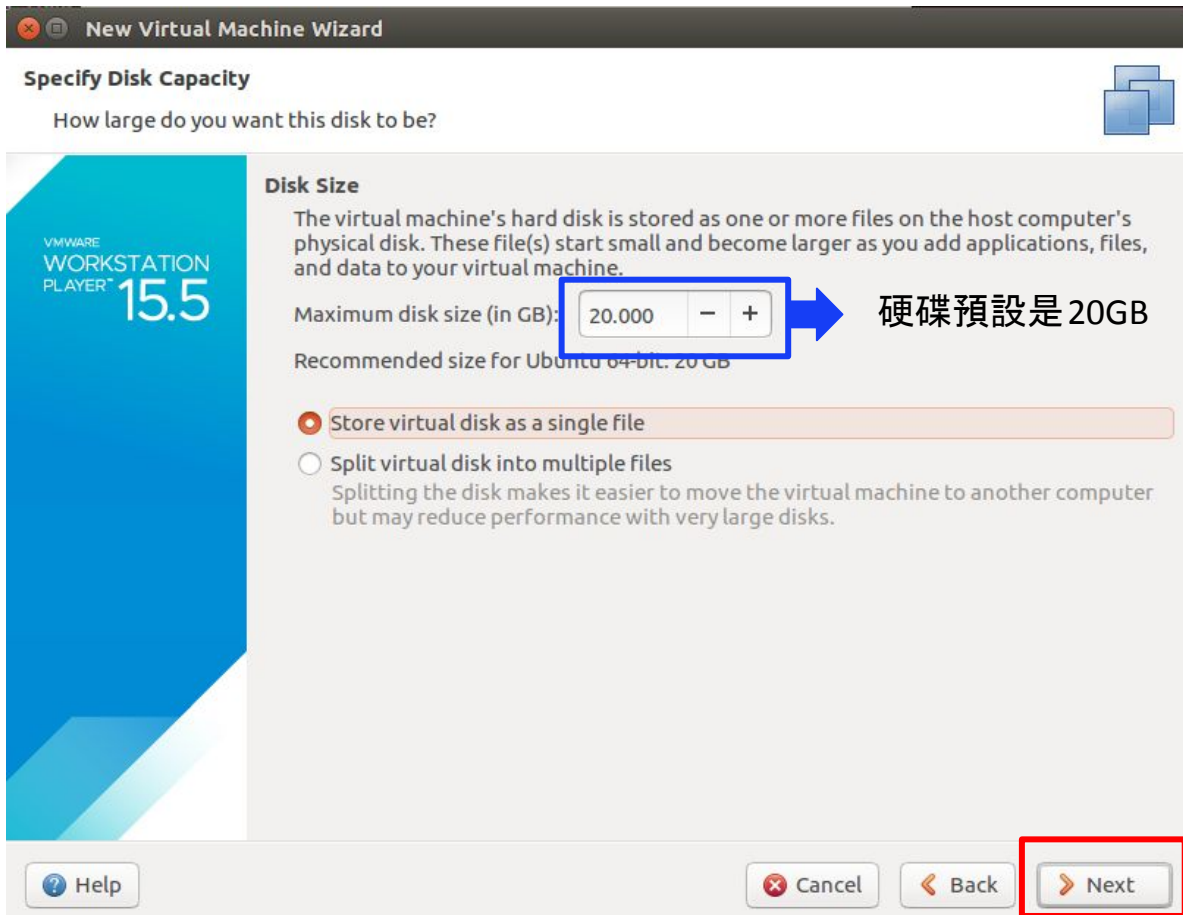

設定完後 > **Next** 下一個步驟。

## 步驟：

命名虛擬機資料夾名稱。

設定完後 > **Next** 下一個步驟。

## 步驟：

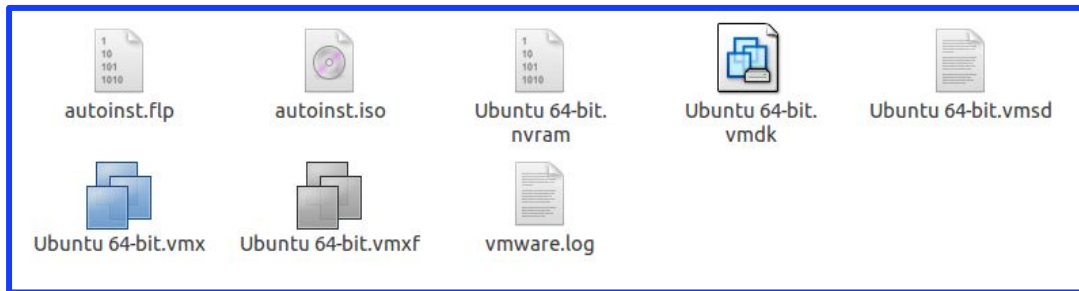

設定硬碟大小，依據自己電腦硬碟規格自行設定。

這裡選擇：

*Store virtual disk as a single file*

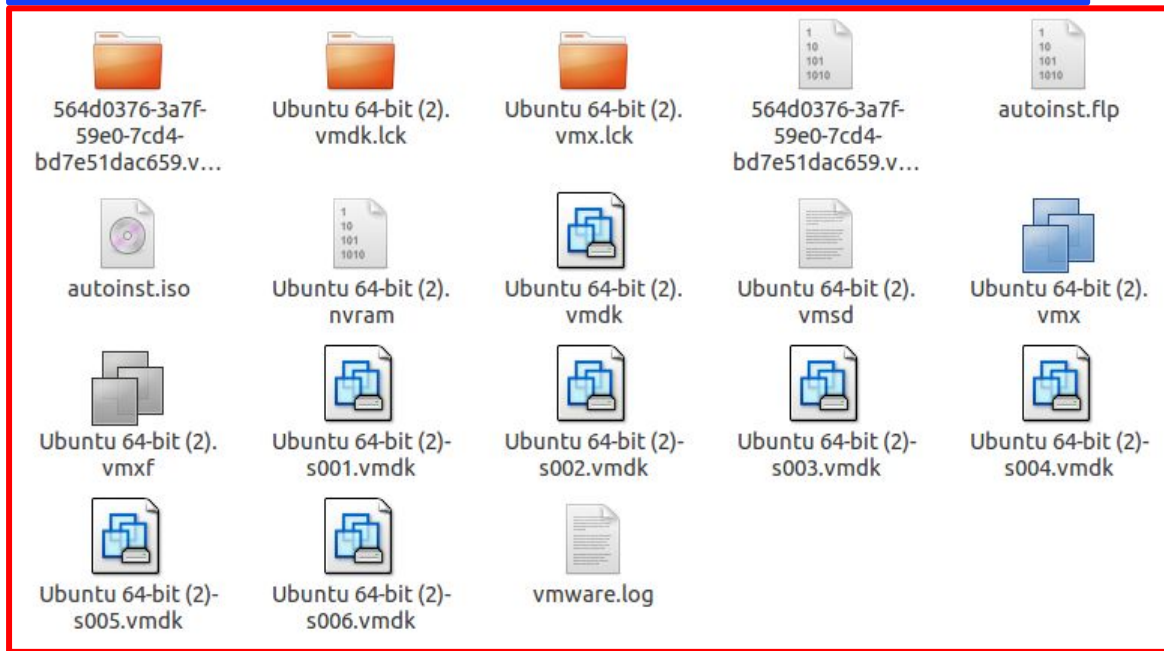

設定完後 > **Next** 下一個步驟。

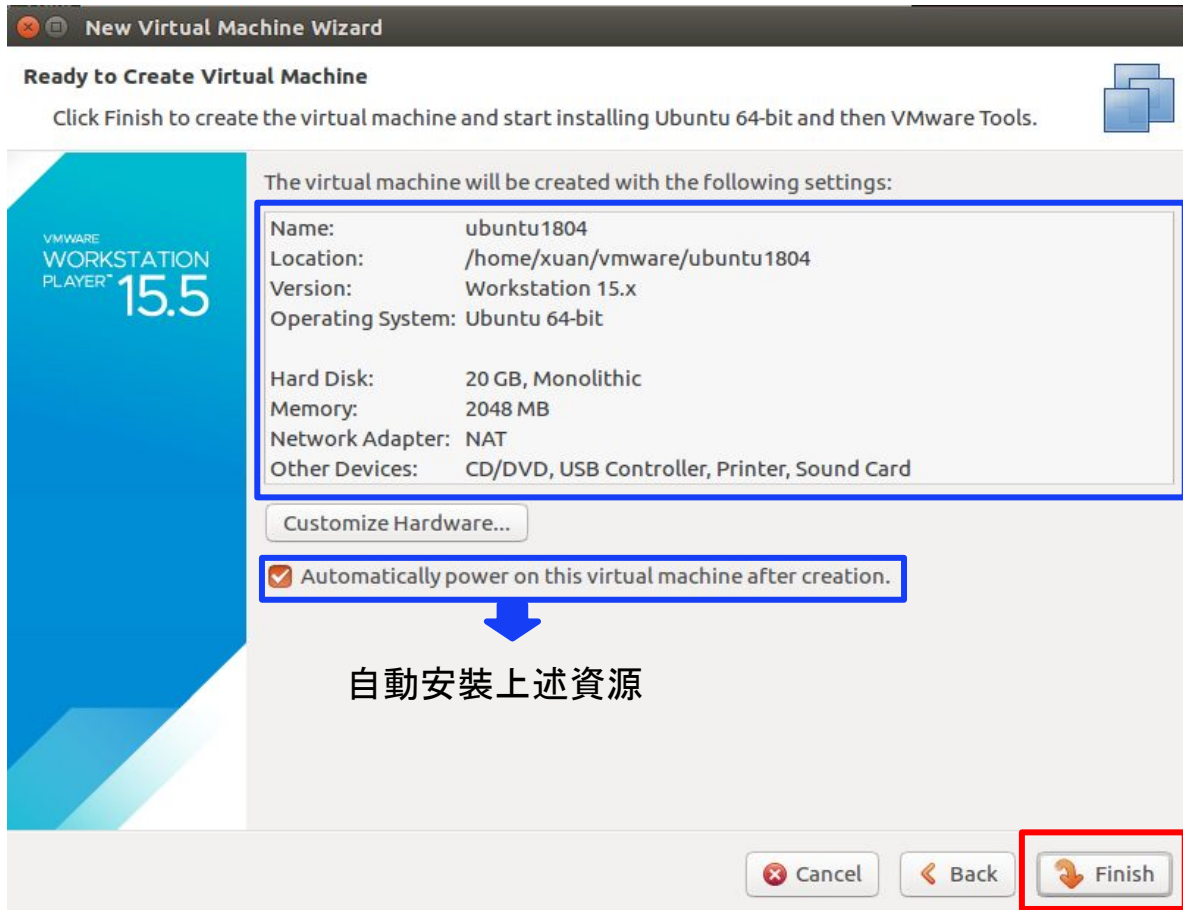

## 我們不一樣？

**Store virtual disk as a single file:** 因為將虛擬硬碟存儲為單個文件，所以備份較為方便。

**Split virtual disk into multiple file:** 因為將虛擬硬碟切割為多個文件，如果是用隨身碟安裝或檔案格式為FAT32的就比合適。(FAT32 每4GB切一個資料夾，若20GB則切5個資料夾。)

## 步驟：

準備創建虛擬機，並且將安裝 VMware Tools。

設定完後 > **Finish** 下一個步驟。

設定使用哪種布局的鍵盤？

在台灣使用的都是美式鍵盤，所以這邊選擇*English(US)*。

### Configure proxy

If this system requires a proxy to connect to the internet, enter its details here.

Proxy address:

If you need to use a HTTP proxy to access the outside world, enter the proxy information here. Otherwise, leave this blank.

The proxy information should be given in the standard form of "http://[[user][:pass]@]host[:port]/".

### Configure Ubuntu archive mirror

If you use an alternative mirror for Ubuntu, enter its details here.

Mirror address:

You may provide an archive mirror that will be used instead of the default.

詢問此系統是否需要外部連接才能連網？

若需要 這邊填 <http://tw.archive.ubuntu.com/ubuntu>

設定完後 **Done** 下一個步驟, 若要返回 **Back** 上一個步驟。

## Filesystem setup

The installer can guide you through partitioning an entire disk either directly or using LVM, or, if you prefer, you can do it manually.

If you choose to partition an entire disk you will still have a chance to review and modify the results.

```
[ Use An Entire Disk ]  
[ Use An Entire Disk And Set Up LVM ]  
[ Manual ]  
[ Back ]
```

用整個硬碟 避免檔案被切割便於管搬移，這裡選 *Use An Entire Disk*.

設定完後 **Done** 下一個步驟，若要返回 **Back** 上一個步驟。

## Filesystem setup

The selected guided partitioning scheme creates the required bootloader partition on the chosen disk and then creates a single partition covering the rest of the disk, formatted as ext4 and mounted at '/'.  
Choose the disk to install to:

```
[ /dev/sda local disk 20.000G ▶ ]  
partition 1 new, bios_grub 1.000M  
partition 2 new, to be formatted as ext4, mounted at / 19.999G
```

這裡指第一顆 SATA 硬碟，不過不一定 SATA 硬碟代表第一顆硬碟！！

確認後 Done 下一個步驟，若要返回 Back 上一個步驟。

### Confirm destructive action

Selecting Continue below will begin the installation process and result in the loss of data on the disks selected to be formatted.

You will not be able to return to this or a previous screen once the installation has started.

Are you sure you want to continue?

[ No ]

[ Continue ]

這裡告訴你，在下邊如果選擇Continue後將開始進行安裝過程，並且將選擇的硬碟區塊格式化，請確保不會使數據丟失。

在安裝開始後，無法再返回或上一步驟。

確認後 Continue 下一個步驟，若要返回no 上一個步驟。

## Profile setup

Enter the username and password you will use to log in to the system. You can configure SSH access on the next screen but a password is still needed for sudo.
